

Petroleum Fuel Distribution and C-Store Operations

Problem

A company specializing in petroleum fuel distribution (heating oil, diesel and gasoline, that also operates several convenience stores was over burdened with outside accounting services. Their in house staff handled all day to day AR/AP functions but the GL and Taxes took entirely too much paperwork. Their legacy systems included a shrink wrap system that handled AR/AP and a custom DOS package that handled their fuel oil business needs.

Solution

AdvanTec implemented a totally integrated business solution comprised of:

- UA Corporate Accounting – Enterprise Edition—10 users
 - With AdvanTec Distribution – Feature Pak
 - And built a custom Fuel Manager Module to replace old DOS application and integrate the fuel oil business.
 - Custom Data Wizards to handle C-Store daily sales/ credit sales statements from direct fuel credit card purchases
- Data migration—consolidating the data from three different systems into UA
- MS – Small Business Server – Network Server

Benefits

- Vastly reduced billing in accounting services
- Elimination of redundant data entry
- Inventory tracking and management
- Enhanced reporting capabilities
- Streamlined operations
- System paid for itself with first 6 months of operation
